

# MM-VC Change in valuation class

## Seamless valuation adjustments: efficient class changes

### Master Data Management

Advanced Workflow

#### BACKGROUND

The valuation class is a central element in SAP that significantly controls account determination. Accurate and careful maintenance of this data is therefore essential. However, changing the valuation class in the material master poses a challenge - once it has been defined, it can often no longer be modified in SAP as soon as stocks exist for the material or account assignment receipts such as purchase orders or production orders exist. This limitation emphasizes the importance of precise initial configuration and strategic planning for the valuation class.

Advanced Workflow is a strategic solution for overcoming the challenges of valuation class changes. This workflow enables companies to handle change processes in the valuation classes efficiently and error-free, even in complex situations with existing stocks or assigned receipts.

#### Advanced Workflow MM-VC

Change in the valuation class for materials

Existing stocks / valuations can be revalued

Uniform, comprehensible adjustment of the valuation class

#### Other Benefits

- ▶ Valuation class change with complete overview of all adjustable options
- ▶ Transactions for changing valuation classes
- ▶ Revaluation of sales order stocks, individual project stocks, production orders and orders that already exist
- ▶ Innovative virtual write-off of inventories to ensure functionality

# Master Data Management

## Key Features

- ▶ Separate customizing for clear maintenance of all options
- ▶ Corresponding selection options such as plant(s), material, material type
- ▶ Explicit transaction for changing valuation classes

## Advanced Workflow

The solution for automating processes in all areas of your business. Efficient workflows focus on intelligent, automated processes to give you more time to achieve your goals. Automating processes reduces manual work, eliminates sources of error and enables fast response times - they form the core of an intelligent business.
